

# The Leading Secure Communication & Collaboration Platform

## Security

Wickr Pro is a user-friendly collaboration platform built with security first. Whether you are messaging, on a call, holding video conferences, file sharing, or using any of our other features, your communications are completely protected by our uncompromised, advanced security protocols.

## Compliance

Wickr Pro allows you to secure all of your communications while still remaining compliant with industry regulations. You are in charge of what information is kept and what is automatically deleted with our expiration and burn-on-read timers. As you collaborate within Wickr, your communications and your customers' data can remain secure.

## Control

Wickr Pro gives you full administrative control over your network. Our security measures are customizable to your needs, so you can decide who has access to what data, set up security protocols, and be alerted if someone is out of network.

*"Given the multitude of attacks and access to communications solutions, enterprises need to deploy, manage and have flexible administrative controls to not only secure sensitive communications, but follow best practices for retaining information as required. Wickr is the only product that offers this through strong encryption, deployment options and selective controls."*

**Joe Sullivan**

Former CSO of Facebook, Uber, and Cloudflare

# Features & Capabilities
